

Web Applications Platform Recommendation for IST-AS

Table of contents

1 Overview.....	2
2 Frequently Asked Questions (FAQs).....	2

1. Overview

IST-ASAG has put forward a recommendation for platforms on which new web applications should be developed in IST-AS. From 8/18 through 8/31/2006, review and comment was solicited from IST staff through the Transition Team. Comments submitted to the Transition Team were delivered to IST-ASAG, and modifications were made to the draft. Further evolution of the draft is expected as a result of ongoing review and comment from groups and individuals within and outside IST, and as a result of pilots on the recommended platforms.

The recommendation is published in its currently-released form here: [web application platform recommendation, v. 1.0.0](#). Companion documents include the [Product / Technology Life Cycle Matrix for Java/JEE](#) and its associated "key" document, [Technology Life Cycle at UC Berkeley](#). These documents remain open to comment; we welcome your input. Please direct feedback or questions to ist-as-architecture@lists.berkeley.edu, a mailing list monitored by the IST-ASAG team.

2. Frequently Asked Questions (FAQs)

A [FAQ](#) has been prepared to respond to questions about this proposal that have been posed to the IST-ASAG team. Topic categories include: Recommendation Scope and Adoption; Java and Rails: Further Definition; About .NET.

If you have additional questions you would like to see addressed in the [FAQ](#) please e-mail them to ist-as-architecture@lists.berkeley.edu.
