## 1. Tools Overview

The IST-AS toolkit for web application / services development is based on the open-source IDE [Eclipse](#). Installation instructions for Eclipse on the Windows OS can be found on this section of the site. The place to get started is the HowTo document [Development Workstation Configuration for IST-AS Web Development](#).

Documentation on [Subclipse Usage](#) is provided as a "quick-start" for developers getting started using UC Berkeley's Subversion code repositories.

Please feel free to offer corrections, feedback, and suggestions on how IST-ASAG can better support the IST-AS toolkit. You can e-mail the team at [ist-as-architecture@lists.berkeley.edu](mailto:ist-as-architecture@lists.berkeley.edu).
